Practice Management Software for Homoeopaths

HomoeoPULSE is complete practice management cum case taking software designed and developed for homeopaths. It is intuitive, simple and organizes your clinics effectively. The software is technologically superior to make your practice and information modernize and systematic. This management tool is ideal for the homeopath reducing the length of time you spend on related patient management and administration, thereby enabling you to research on the patients, diseases and you never need to enter the same information twice!

Thus you can compare any section of saved the case sheets and analyze the progress of case.

There are customized case sheets for *Acute Case* and *Chronic Case*. Also based on the practicing style and patient's complaint, user can go for '*Quick Case taking sheet*' or '*Detailed Case taking sheet*'. The detailed case taking section is developed in a way to collect and analyze each and every detail that are related to a patient and his disease and then come to a decision of precise remedy. Sections like psychological area in the detailed case taking sheet can be improved or updated from the user side. The dynamic controls in the settings area supports the user to improve the software to his needs.

HomoeoPULSE is multi- dimensional software, in one dimension it's an efficient and advanced case taking software and in the other dimension it effectively and precisely manages your practice and clinic(s). The software is adaptable for a single doctor clinic, multiple doctor clinic, clinic with supporting staff and for a doctor practicing in multiple clinics. It is a smart way of practicing eliminating all paper works.

The case sheets in the software are developed considering the individuality of homoeopaths in mind. You can enter all relevant information as much it required on concerned fields of the case sheet. To minimize the effort of typing many features have been incorporated like auto fill. Enter the collected information regarding the case, decide on the remedy, give the next appointment, then save and close the case sheet. Now the case sheet of the patient is available to you whenever it required. You can edit, do follow up or delete the case sheet. Information gathered at each visit will be saved separately and it can be displayed date wise.

The software is also being supported by *Kent* and *Boerick* repertories. The specialty is that the repertory goes along with the case taking sheet. So that you can refer repertory and add rubrics while taking the case. Interacting with repertory is possible at every stage of case taking. As the rubrics is being selected from the repertory along with case sheet, in the end of the case taking, a rubric chart from the repertory will be ready for your reference. This will avoid the effort of reperotization after case taking. There is also an option to upload and save the repertory charts generated from other repertory softwares like Radar.

The user can refer past prescriptions of the case from the prescription window itself date wise. If your version of software is 'stock' module activated, then your prescription will automatically affect the stock of medicine in your clinic. The *remedy relationship* chart integrated with the prescription window helps to an easy reference to related remedies of follow up cases.

The software allows to keep videos or photographs related to the patients' disease along with the case sheet, so doctor can analyze the improvements stage by stage and even use the materials for a future research. All relevant parameters for analyzing the lab reports are included for the ease of user.

The '*Stock*' module is designed and developed perfectly for managing the complete medicines stock. The complex and minute units and potencies of Homoeo medicines are integrated to the stock module effectively to keep the stock of medicine in the clinic accurately. It also gives low stock reminders even during the prescription, and can generate a purchase order that can be send directly to specified dealer.

The '*accounts*' section is designed to enter daily income and expenses and to give proper reports about the economic status of the Clinic. Back up of the data in the software will not be a headache to the users as it can be safely saved to internal or external devices specified by the users.

You can keep your reference books, presentations, seminars, images, videos etc safely and neatly in HomoeoPULSE itself. So that such materials will be close to you anywhere and anytime for your reference or research. *Additional tools* like BMI calculator, Pregnancy Calculator, Daily Calorie needs and many more are also included for the ease of your practice.

The software is available in various options in *online* and *offline* modes. The users can select the suitable model based on their requirement. The online model of the software can be integrated with a personal software and can access from any where in the world. Also it will be a good tool to those who are doing online consultation.
